Sigma-tactical offers a wide range of targets for reality-based training, designed to cover the contemporary threats our armed forces and law enforcement may encounter and must incorporate into their training.

All our products and catalog are updated on a regular basis to respond to the new challenges and threats our customers can face in real-life situations. If your training requires particular needs, we can create custom-made targets following your specifications; do not hesitate to contact us for a quote.

All our targets are created and printed in France and sold at a very competitive price.

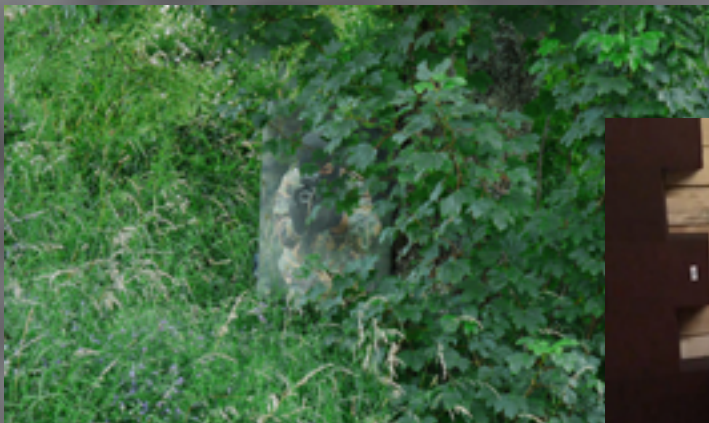

TRAINING TARGET

STICK 9mm et 45 ACP

Sigma Training Instruction Control Kit

The S.T.I.C.K. is a safety device allowing you to secure your firearm for dry-fire practice or during transportation : The STICK will block both the barrel and the chamber –without disassembling- and offer a visible cue that your firearm is secured.

Barrel Max Lenght : 4.3 in.

New in 2018 : our S.T.I.C.K. now features a US 8-32 thread, compatible with bore brushes and other cleaning accessories.

MODE D'EMPLOI

AVANT TOUTE MANIPULATION VERIFIEZ QUE VOTRE ARME N'EST PAS CHARGÉE

1-bloquez la culasse de votre arme en position ouverte et insérez la partie B du STICK dans la chambre, partie creuse vers l'avant.

2-insérez la partie A par le canon jusqu'à ce qu'elle arrive au contact de la partie B. Continuez à pousser la partie A jusqu'à ne plus pouvoir l'enfoncer plus loin dans le canon.

3-assurez-vous que la partie A soit bien fixée à la partie B.

Votre arme est désormais en sécurité.

4-pour retirer le STICK, bloquez la culasse de votre arme en position ouverte et retirez la partie A du canon en effectuant une demi rotation.

5-retournez la partie A et insérez-la dans le canon afin de faire sortir la partie B de la chambre puis retirez la partie A du canon.

Attention :
Insérer le STICK dans un canon froid.
Pour l'entretien lubrifier les joints.

AVERTISSEMENTS

-Sigma Tactical ne peut en aucun cas être tenu responsable des dommages causés par ou liés à une utilisation anormale de ce matériel.

- Matériel garanti à vie hors anodisation et joints toriques.

-Matériel compatible avec les armes chambrées en 9x19mm (9mm parabellum) avec un canon ne dépassant pas 11 cm.
